About

You can share this PDF with anyone you feel could benefit from it, downloaded the latest version from: [hybris](#)

It is an unofficial and free hybris ebook created for educational purposes. All the content is extracted from [Stack Overflow Documentation](#), which is written by many hardworking individuals at Stack Overflow. It is neither affiliated with Stack Overflow nor official hybris.

The content is released under Creative Commons BY-SA, and the list of contributors to each chapter are provided in the credits section at the end of this book. Images may be copyright of their respective owners unless otherwise specified. All trademarks and registered trademarks are the property of their respective company owners.

Use the content presented in this book at your own risk; it is not guaranteed to be correct nor accurate, please send your feedback and corrections to info@zzzprojects.com

Chapter 1: Getting started with hybris

Remarks

This section provides an overview of what hybris is, and why a developer might want to use it.

It should also mention any large subjects within hybris, and link out to the related topics. Since the Documentation for hybris is new, you may need to create initial versions of those related topics.

Versions

Version	Release Date
6.4.0.1	2017-05-31

Examples

Installation of an example implementation of the hybris platform

To have a look of the different functionalities of the hybris platform, you can use the install recipes. For this, just download the **HYBRISCOMMXXX_X-XXXXXXXX.ZIP** and extract it to you local device. Than go through the following steps:

The <recipe_names> you can find under the folder \hybris\installer\recipes.

Windows:

1. `open command shell`
2. Browse to the `\hybris\installer` directory
3. `install.bat -r <recipe_name>`
4. `install.bat -r <recipe_name> initialize`
5. `install.bat -r <recipe_name> start`
6. open browser and go to `localhost:9001`

Linux or Mac:

1. `open command shell`

2. Browse to the `\hybris\installer` directory
3. `./install.sh -r <recipe_name>`
4. `./install.sh -r <recipe_name> initialize`
5. `./install.sh -r <recipe_name> start`
6. open browser and go to `localhost:9001`

For more Information about the default install recipes have a look here: [Hybris WIKI](#) - (needs registration)

How to Setup your own 'modifiable' Hybris Accelerator
