About

You can share this PDF with anyone you feel could benefit from it, downloaded the latest version from: [moodle](#)

It is an unofficial and free moodle ebook created for educational purposes. All the content is extracted from [Stack Overflow Documentation](#), which is written by many hardworking individuals at Stack Overflow. It is neither affiliated with Stack Overflow nor official moodle.

The content is released under Creative Commons BY-SA, and the list of contributors to each chapter are provided in the credits section at the end of this book. Images may be copyright of their respective owners unless otherwise specified. All trademarks and registered trademarks are the property of their respective company owners.

Use the content presented in this book at your own risk; it is not guaranteed to be correct nor accurate, please send your feedback and corrections to info@zzzprojects.com

Chapter 1: Getting started with moodle

Remarks

Moodle is a learning platform designed to provide educators, administrators and learners **with a single robust, secure and integrated system** to create personalised learning environments. You can **download** the software onto your own web server.

Moodle is built by the Moodle project which is led and coordinated by **Moodle HQ**, an Australian company of 30 developers which is financially supported by a network of over 60 Moodle Partner service companies worldwide.

Moodle is an Open Source Course Management System (**CMS**), also known as a Learning Management System (**LMS**) or a Virtual Learning Environment (**VLE**). It has become very popular among educators around the world as a tool for creating online dynamic web sites for their students. To work, it needs to be installed on a web server somewhere, either on one of your own computers or one at a web hosting company.
