# Chapter 1: Getting started with opencart2.x

## Remarks

This section provides an overview of what opencart2.x is, and why a developer might want to use it.

It should also mention any large subjects within opencart2.x, and link out to the related topics. Since the Documentation for opencart2.x is new, you may need to create initial versions of those related topics.

## Examples

### Installation or Setup

There are following setups to install opencart on your webserver

1. Download the latest version of opencart for the official [website](#) or [github](#) and extract the files. In extracted files you can see the `upload` folder, `license.txt` file and `readme.txt` file

The `upload` folder contains all the files to host open-cart website needed to upload on server. `license.txt` contains the license agreement and `readme.txt` file contains current install and upgrade instructions.

2. The next setup to upload files on web-server. You can use the **filezilla** to upload the files.
3. Create database for you shop using cpanel . C panel provides an interface named `phpmyadmin` to create database.
4. You have to rename the two files named `config-dist.php` to `config.php` and `admin/config-dist.php` to `admin/config.php` .
5. Final step is to run auto-installer. Open your browser and run your shop url, you can see the installation first page.

# Chapter 2: How to Use OpenCart Filter Module

## Examples

### 1. Create a filter group

Go to **Catalog > Filters** and select Insert to create a filter group. Assign a filter group name (e.g. Color) and add filter name values (e.g. Blue, Red, Yellow).

### 2. Add the filters to categories

Go to **Catalog > Categories** and Edit a category. Under the Data tab add the filters you want to be able to apply to that category (e.g. Color > Blue, Color > Red).

### 3. Add the filters to product

Go to **Catalog > Products** and Edit a product. Under the Links tab add the filters which apply to the product (e.g. Color > Blue). Apply to as many products as applicable.

### 4. Install & Edit module

Go to **Extensions > Modules > Filter**. If not installed select Install. Click Edit & then Enabled from option & then Save module.

### 5. Set module position in Layout

Go to **Design > Layout > Edit Category Page** and Set whatever position and sort order you would like. and then save.
