shiny UI server ◦ UI “Hello world”◦

### UI.R

UI div◦

```
library(shiny)

# Define UI for application print "Hello world"
shinyUI(
  # Create bootstrap page
  fluidPage(
    # Paragraph "Hello world"
    p("Hello world"),

    # Create button to print "Hello world" from server
    actionButton(inputId = "Print_Hello", label = "Print_Hello World"),

    # Create position for server side text
    textOutput("Server_Hello")
  )
)
```

### Server.R

◦

```
# Define server logic required to print "Hello World" when button is clicked
shinyServer(function(input, output) {
```

```

# Create action when actionButton is clicked
observeEvent(input$Print_Hello, {

  # Change text of Server_Hello
  output$Server_Hello = renderText("Hello world from server side")
})

})

```

1. runApp('your dir path')
2. **uiserver**shinyApp(ui, server)

Hello world

**Print\_Hello World**

Hello world

**Print\_Hello World**

Hello world from server side

**shinyApp**plotOutput**UI**renderPlot ggPlot

```

library(shiny)
library(ggplot2)

ui <- fluidPage(
  plotOutput('myPlot'),
  plotOutput('myGgPlot')
)

server <- function(input, output, session){
  output$myPlot = renderPlot({
    hist(rnorm(1000))
  })
  output$myGgPlot <- renderPlot({
    ggplot(iris, aes(Sepal.Length, Sepal.Width, color = Species)) + geom_point()
  })
}

shinyApp(ui, server)
