# Chapter 1: Getting started with word-vba

## Remarks

This section provides an overview of what word-vba is, and why a developer might want to use it.

It should also mention any large subjects within word-vba, and link out to the related topics. Since the Documentation for word-vba is new, you may need to create initial versions of those related topics.

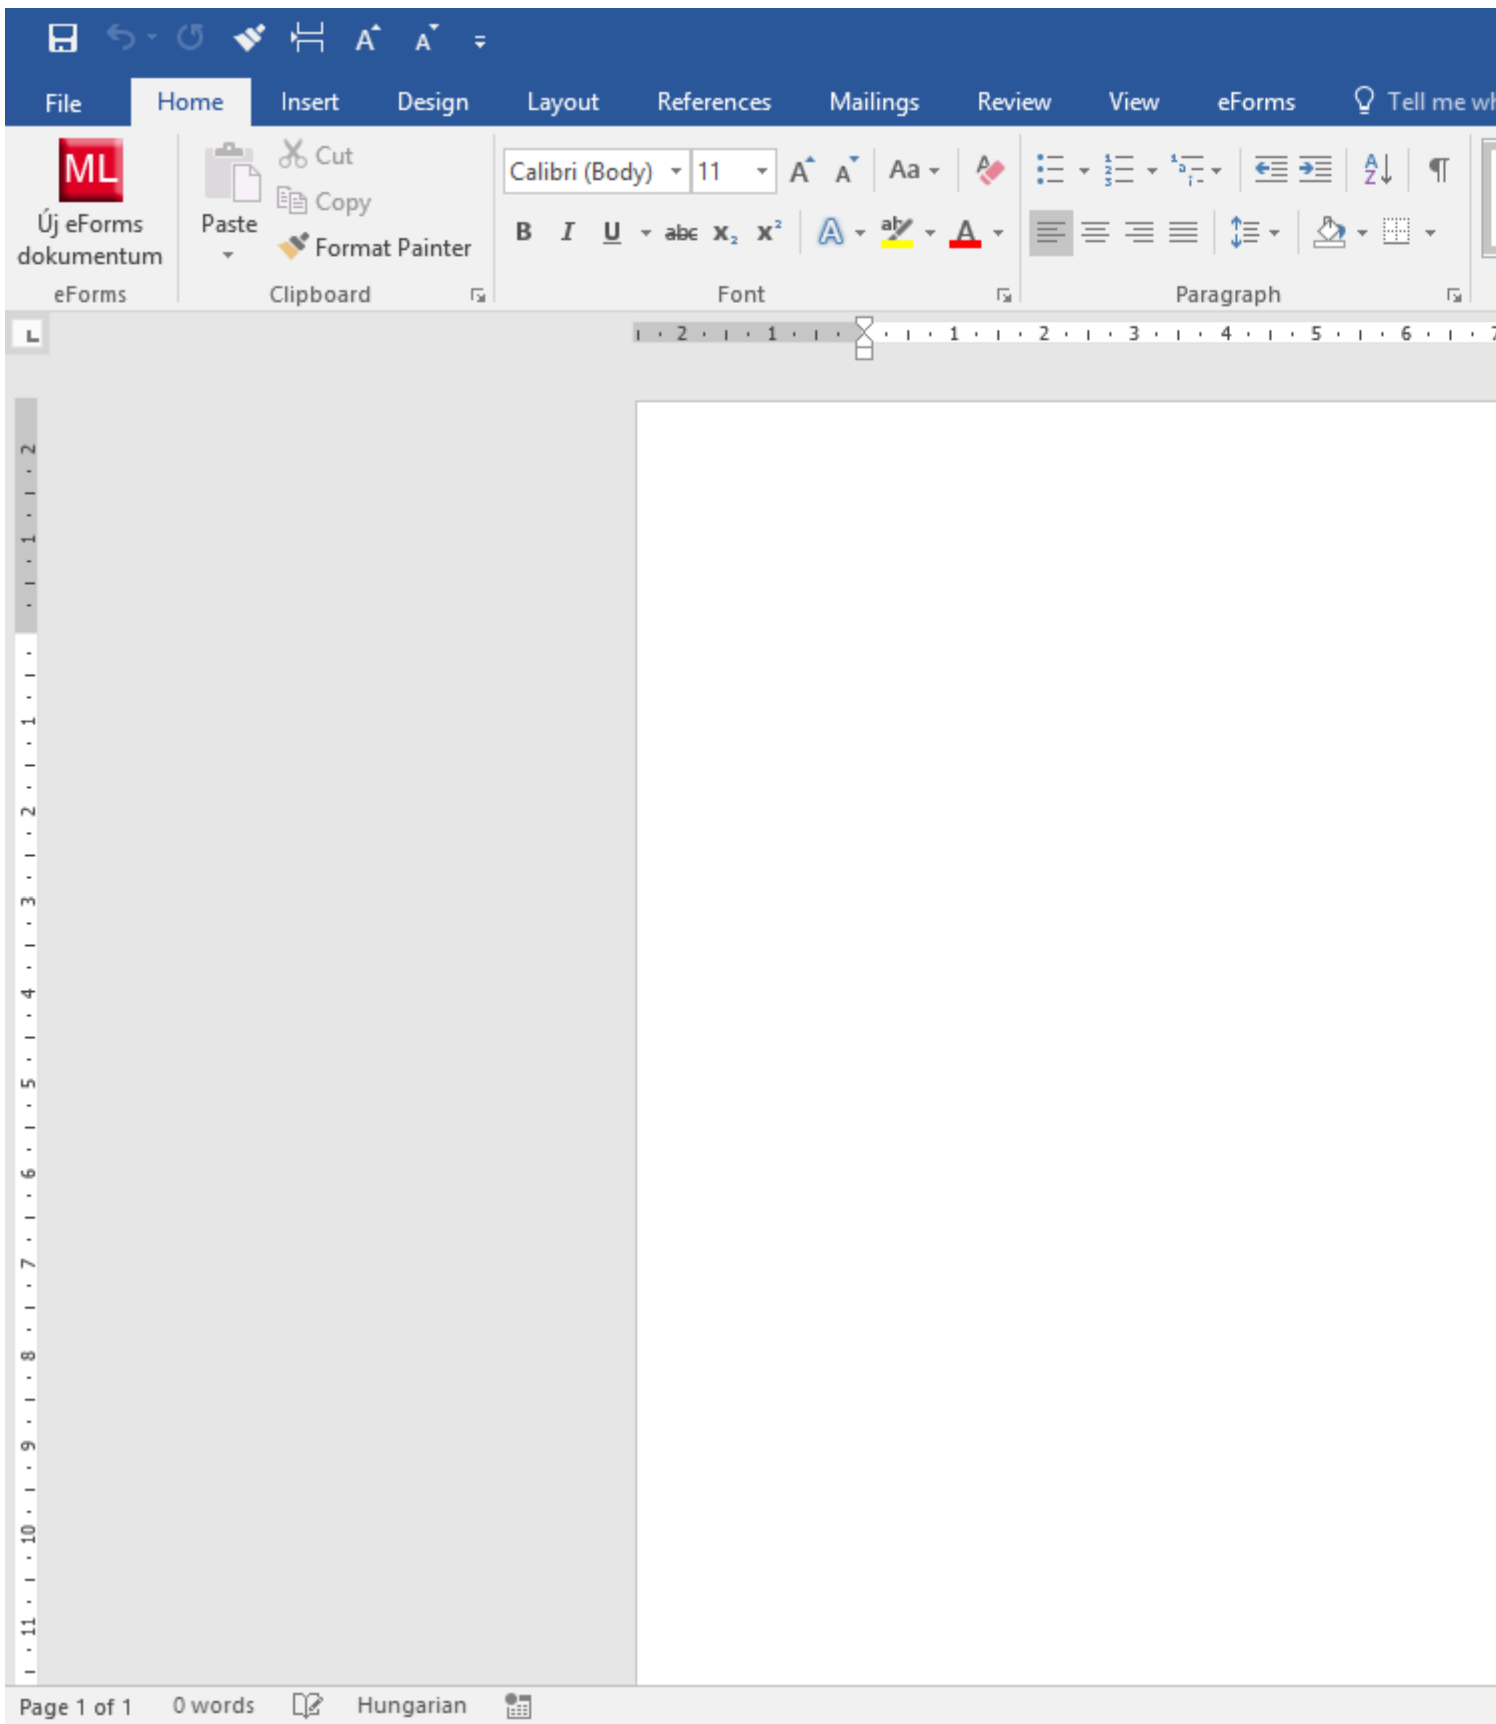

## Examples

### Installation or Setup

Detailed instructions on getting word-vba set up or installed.

### Opening the Visual Basic Editor

#### Step 1: Open a Document

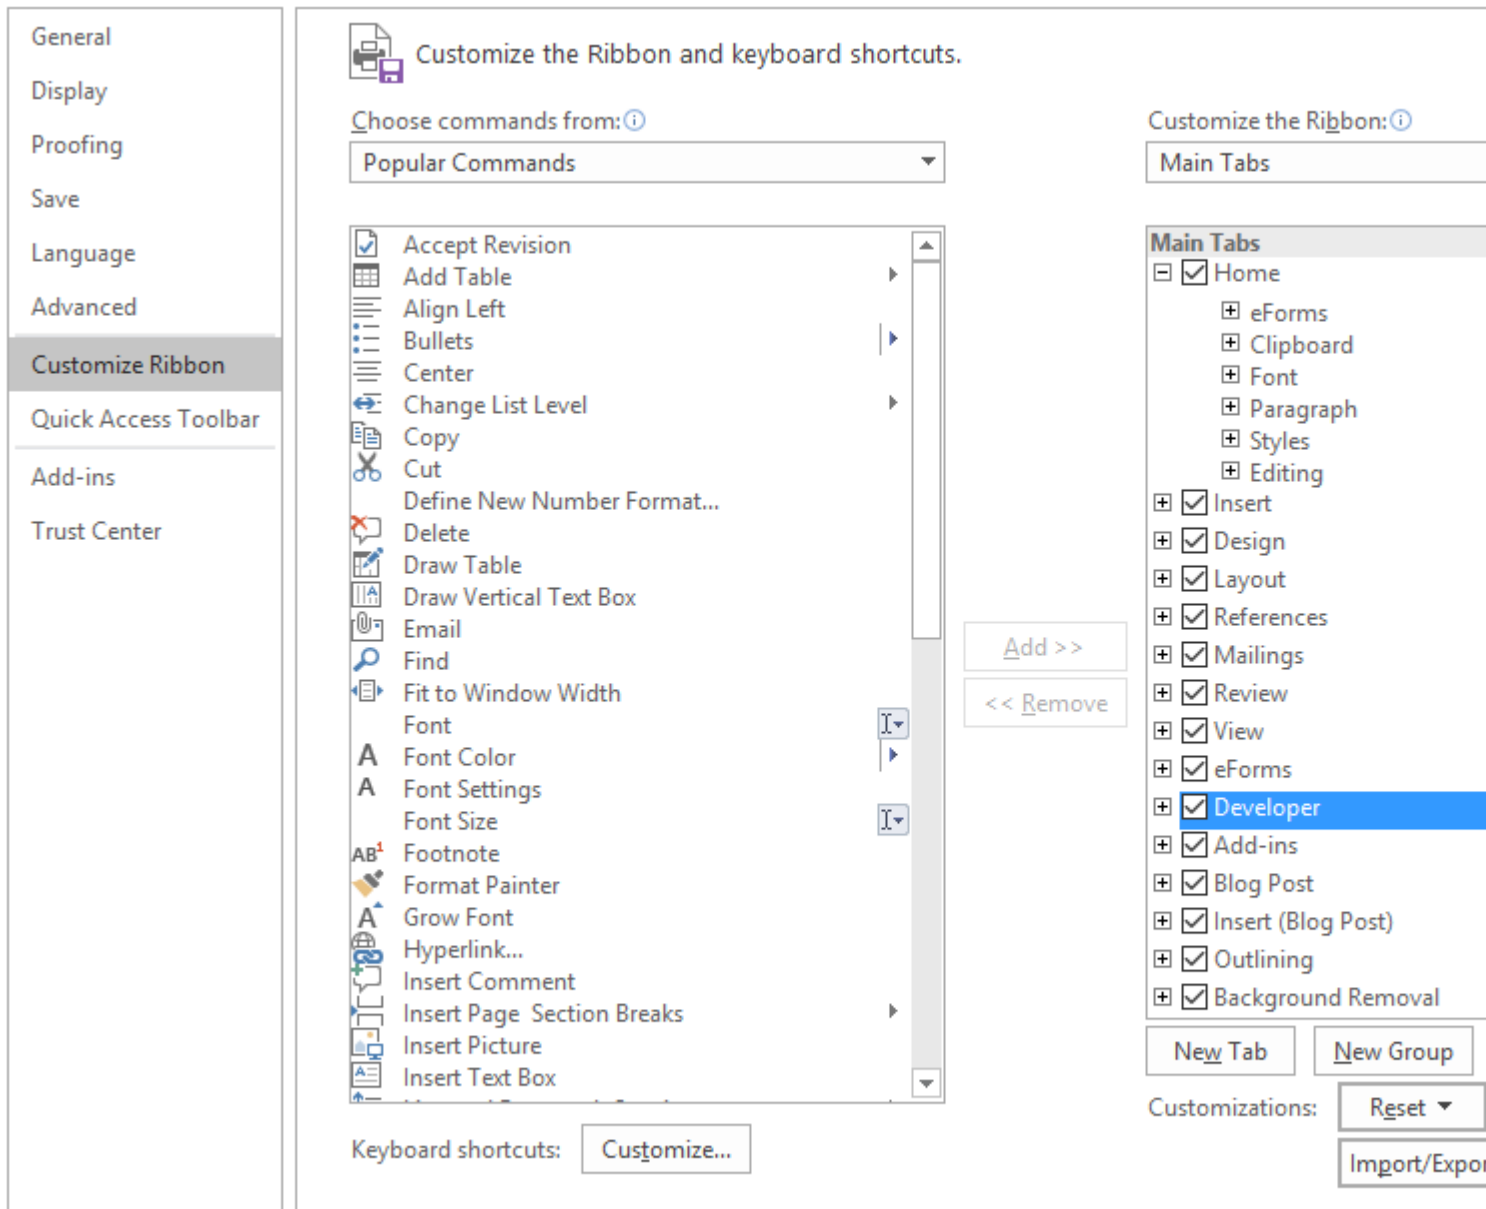

## Step 2 Option A: Press Alt + F11

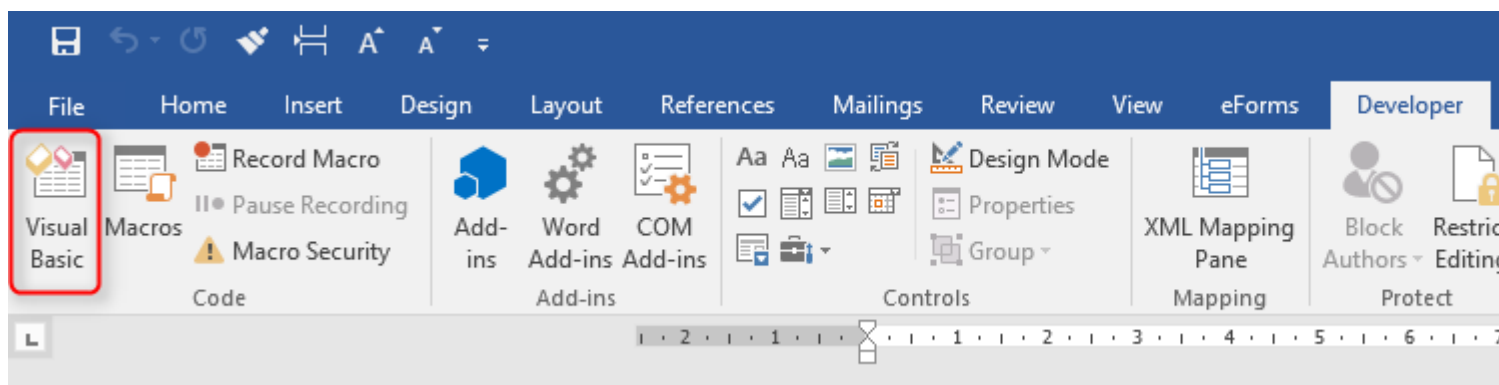

This is the standard shortcut to open the VBE.

## Step 2 Option B: Developer Tab --> View Code

First, the Developer Tab must be added to the ribbon. Go to File -> Options -> Customize Ribbon, then check the box for developer.

Then, go to the developer tab and "Visual Basic"

This will open the Visual Basic Editor:

Project - Project

Project Explorer showing a tree view with folders: Normal, Project (Document1), Microsoft Word Objects, ThisDocument, References, and saxEBPTools (EBPTools).

Properties - ThisDocument
